

Utkarsh Patil

+91 8105605853 | patilutkarsh792@gmail.com | Github | Linkdin

Motivated 4th-year B.Tech Computer Science student with strong skills in programming, web development, and AI-based applications. Experienced in building real-time projects using React.js, and OpenCV, seeking opportunities to apply problem-solving skills in real-world environments.

Education

9.21/10.0	BTech in Computer Science Engineering , Reva University Bangalore, India	2023-27
91.4 %	XII (HSC) in PCM , Kendriya Vidyalaya no2 Belgavi, India	2022-23
94.8 %	X (SSC) , Kendriya Vidyalaya no2 Belgavi, India	2020-21

Skills

Programming languages: Python, C, Java, SQL, JavaScript

Web development: HTML, Node.js, Express.js, CSS, Spring Boot

Databases and CLI: MySQL (Relational), MongoDB (Non-Relational, Supabase), Supabase

CS Fundamentals: Data structures and Algorithms, Operating Systems, Database Management Systems

Data Analysis: Pandas, Matplotlib, NumPy

Projects

Token Lens- AI Usage Monitoring & Waste Intelligence Platform | GitHub

Developed AI-usage monitoring & waste intelligence platform

- Built an AI-powered platform that classifies enterprise prompts via the Claude API and flags wasteful model usage
- Designed a Waste Score algorithm to detect mismatches between model cost and task complexity
- Developed a full-stack dashboard (React + FastAPI) visualizing AI spend by team, model, and time
- Sourced and cleaned real-world usage data from public GitHub repos using an ethical data methodology

AI-Based Proctoring & Examination Tool | GitHub

Developed real-time AI-powered proctoring system to ensure exam integrity

- Implemented face detection, gaze tracking, and suspicious behavior detection using Tiny Face Detector
- Built full-stack exam platform using React (Vite) with Supabase for real-time monitoring and session storage
- Generated violation logs and reports for post-exam auditing
- Technology used : JavaScript, React (Vite), Supabase, Node.js, OpenCV (JS), npm, Git, GitHub

Smart Disaster Alert & Visualization System | GitHub

Developed real-time disaster monitoring system using data analytics and NLP

- Detected disaster-related events and visualized them on interactive maps (OpenStreetMap, Leaflet)
- Implemented filters, real-time alerts, and stored data using MongoDB
- Technology used: Python, Streamlit, MongoDB, OpenStreetMap, Leaflet, Git, GitHub

Certificates And Achievements

2023 **Reliance Scholar**, Got Selected in RF Program among 5000 scholars from a pool of 50000

2024 Problem solving with C (Swayam)

2025 IBM Skillsbuild certifications
